

PhishER, KnowBe4's industry-leading Security Orchestration, Automation and Response (SOAR) platform, takes an otherwise complicated threat management workflow and allows admins to quickly reduce risk directly where it is needed most.

Reporting Messages

PhishER seamlessly integrates with KnowBe4's Phish Alert Button, a safe way to forward email threats to the security team for analysis and remove the email from the user's inbox to prevent future exposure

PhishRIP Remove Suspicious Emails

PhishRIP™, built into PhishER, lets Security Operations Center (SOC) teams easily find and quarantine suspicious messages still sitting in mailboxes across your entire organization

4.5 million
malicious messages removed from users inboxes

3 million
messages quarantined*

PhishFlip Flip the Script on Cybercriminals

PhishFlip™, built into PhishER, automatically turns user-reported phishing attacks targeted at your organization into safe simulated phishing campaigns - in real time

280K
malicious user-reported emails flipped

35K
safe simulated phishing campaigns executed

*In August 2022

See for yourself how PhishER can help you identify and respond to email threats faster!
