

Stop Phishing Threats In Their Tracks With Crowdsourced Threat Intelligence

Secure email gateways (SEG) and spam filters are now the fundamental starting point for email protection and cybersecurity. But they're not foolproof. A substantial volume of phishing attempts can still slip by. To mitigate phishing threats that SEGs miss requires crowdsourced threat intelligence and AI-powered validation and analysis. **Here's why:**

SEGs and SPAM Filters Can Only Do So Much

78%

Three out of four 2022 phishing attacks used sophisticated techniques to bypass email security tools ¹

56%

Over half of phishing emails bypassed legacy security filters to make it to a user's inbox ¹

19%

Phishing emails that bypassed Microsoft Exchange Online Protection and Defender ²

Threat actors are increasingly using image-based textual messages to evade text-based security ³
